ACKNOWLEDGMENTS

On behalf of Woolpert, we would like to extend our appreciation to the Iowa City Community School District for the opportunity to assist them in developing this Enrollment Projections Report which includes projections by boundary of residence in the appendix. As a planning team, we hope that this document will serve the Iowa City Community School District for years to come.

EXECUTIVE SUMMARY

The district-wide enrollment projections and enrollment projections by boundary of residence for the Iowa City Community School District included in this report were developed using the cohort survival methodology and Woolpert's custom enrollment projection software, S.T.E.P. [Student Trends & Enrollment Projections]. This custom software was developed in collaboration with The Ohio State University and is based on industry best practices as well as the national experience Woolpert has with schools, school districts, and state agencies.

The Iowa City Community School District serves 14,415 K-12 students in Iowa City, Coralville, Hills, North Liberty, University Heights, and surrounding rural areas in the 2024-25 school year.

The district-wide enrollment projections presented in this report are meant to serve as a planning tool for the future, representing the most likely direction of the District. Enrollment projections were developed using the cohort survival methodology and by analyzing the following data outlined in this report:

- Historical enrollment by grade, by year
- Resident live birth data
- Census data
- Building permits

The enrollment projections presented in the appendix of this report were developed based on students **living within** the current school boundaries.

Enrollment in the Iowa City Community School District has increased by 1,198 students from the 2015-16 to the 2024-25 school year. Since the 2019-20 school year, K-5 enrollment has decreased by 394 students. Based on the cohort survival methodology, enrollment is projected to decrease over the next ten years.

As with any projection, the District should pay close attention to the variables associated with determining enrollment projections discussed in this document. Any one or more of these factors can increase or decrease enrollment within the Iowa City Community School District. When projecting future enrollments, it is vital to track the number of live births, the amount of new housing activity, and the change in household composition. It is recommended that the data contained in this report should be reviewed on an annual basis to determine how more recent trends and any new housing development will impact the enrollment. In addition, any of the following factors could cause a significant change in projected student enrollment:

- Boundary adjustments
- New school openings
- School closures
- Changes / additions in program offerings
- Preschool programs
- Policy Changes
- Changes in grade configuration
- Interest rates / unemployment shifts
- Intra- and inter-District transfers
- Magnet / charter / private school openings or closures
- Zoning changes
- Annexations
- Unplanned new housing activity
- Planned, but not built, housing
- School voucher programs
- Transportation policy changes
- Pandemics

Obviously, certain factors can be gauged and planned for far better than others. For instance, it may be relatively straightforward to gather housing data from local builders regarding the total number of lots in a planned subdivision and calculate the potential student yield. However, planning for changes in the unemployment rate, and how these may either boost or reduce public school enrollment, proves to be more difficult. In any case, it is essential to gather a wide variety of information in preparation for producing enrollment projections.

When looking ahead at a school district's enrollment over the next two, five, or ten years, it is helpful to approach the process from a global perspective. For example: How many new homes have been constructed each year? How many births have occurred each year in relation to the resident population? Is housing experiencing a turnover—if so, what is the composition of families moving in/out? Are more or less students attending private school or being home-schooled? What has the unemployment rate trend been over the past ten years? What new educational policies are in place that could affect student enrollment figures?

The cohort survival methodology is a standard methodology used throughout the educational planning industry to project enrollment. The enrollment projections developed for the Iowa City Community School District were developed using the cohort survival method.

ENROLLMENT PROJECTION METHODOLOGY

Introduction

Tracing the landscape of the country's public school enrollment back over the past fifty years reveals demographic, economic, and social changes. The United States as a whole continues to undergo major shifts in public student enrollment, due in large part to past events including the baby boom, the availability and use of birth control, and the development of suburbs. The baby boom of the late 1940s and 50s was followed by the baby bust of the 1960s and 70s. This gave rise to the echo baby boom of the 1980s.

Nationwide, districts have experienced the effects of the echo baby bust of the 1990s. From the 1950s to the 1970s, a dramatic downsizing of the family unit occurred. A direct result was the declining school enrollment of the 1970s and 1980s. As of the 2010 Census, the size of a family was at an all-time low of 3.14 persons. The live birth rate increased for the first time in several years in 1998 and increased again in 2000 and 2006. However, the birth rate resumed a descending pattern in 2008 and reached an all-time low of 10.9 (per 1,000) in 2020 and remained at 11.0 through 2022.

Cohort Survival Method

The cohort survival methodology (sometimes referred to as the grade progression ratio method) is a widely used enrollment projection model that is used by many school districts and state and federal agencies to project K-12 enrollment.

A cohort is a group of persons [in this case, students]. The cohort survival enrollment projection methodology uses historic live birth data and historic student enrollment to “age” a known population or cohort throughout the school grades. For instance, a cohort begins when a group of kindergarteners enrolls in grade K and moves to first grade the following year, second grade the next year, and so on.

A “survival ratio” is developed to track how this group of students increased or decreased in number as they moved through the grade levels. By developing survival ratios for each grade transition [i.e. 2nd to 3rd grade] over a ten year period of time, patterns emerge. A projection ratio for each grade transition is developed based on analysis of the survival ratios. The projection ratios are used as a multiplier in determining future enrollment.

For example, if student enrollment has consistently increased from the 8th to the 9th grade over the past ten years, the survival ratio would be greater than 100% and could be multiplied by the current 8th grade enrollment to develop a projection for next year’s 9th grade. This methodology can be carried through to develop ten years of projection figures. Because there is not a grade cohort to follow for students coming into kindergarten, resident live birth counts are used to develop a birth-to-kindergarten survival ratio. Babies born five years previous to the kindergarten class are compared in number, and a ratio can be developed to project future kindergarten enrollments.

The cohort survival method is useful in areas where population is stable [relatively flat, growing steadily, or declining steadily], and where there have been no significant fluctuations in enrollment, births, and housing patterns from year to year. The cohort survival methodology inherently considers the net effects of factors such as migration, housing, dropouts, transfers to and from charter schools, open enrollment, and deaths. This methodology does not assume changes in policies, program offerings, or future changes in housing and migration patterns.

U.S. CENSUS

This section presents data from the United States Census Bureau and estimates from the American Community Survey (ACS) to demonstrate the demographic characteristics and historic trends of the population within the District boundary. While the Census is conducted every 10 years, the American Community Survey collects social, housing, educational, occupational, financial, and other demographic data from over 3.5 million households throughout the nation monthly and is compiled yearly, as mandated by the U.S. Constitution. This data helps public officials, federal/state/local agencies, school districts, etc. assess historic trends and plan for the future.

The Iowa City Community School District is located in Johnson County, Iowa. It serves parts or all of the following localities: Clear Creek township, East Lucas township, Iowa City city, Liberty township, Lincoln township, Newport township, Penn township, Pleasant Valley township, Scott township, Sharon township, Union township, West Lucas township, Coralville city, Hills city, , North Liberty city, and University Heights city. The data on the following pages is aggregated and color-coordinated by the boundaries shown in the map on the following page.

It should be noted that the District does not necessarily serve whole localities but data presented by locality is for the whole locality.

Students by Locality

The table below and pie charts on the following page show how many Iowa City Community School District students live in the District boundary and each locality served by the District, by year, according to 2023-24 and 2024-25 student data. The percentages for each locality are based on the total students in the Iowa City Community School District. The total at the bottom of the table indicates the total number of students in the District, not the sum of the values in the table.

Historical Enrollment by Census Locality	2023-24	2024-25
Iowa City Community School District Boundary	13,844 97.1%	14,012 97.3%
Johnson County	14,131 99.1%	14,297 99.3%
Clear Creek township	206 1.4%	218 1.5%
East Lucas township	56 0.4%	62 0.4%
Iowa City city	7,046 49.4%	7,237 50.2%
Liberty township	108 0.8%	97 0.7%
Lincoln township	3 0.0%	7 0.0%
Newport township	147 1.0%	146 1.0%
Penn township	4,873 34.2%	4,823 33.5%
Pleasant Valley township	4 0.0%	5 0.0%
Scott township	358 2.5%	362 2.5%
Sharon township	13 0.1%	12 0.1%
Union township	65 0.5%	53 0.4%
West Lucas township	1,095 7.7%	1,117 7.8%
Coralville city	5,238 36.7%	2,532 17.6%
Hills city	76 0.5%	74 0.5%
North Liberty city	2,879 20.2%	2,892 20.1%
University Heights city	90 0.6%	96 0.7%
Total Students*	14,257	14,404

*This total reflects the amount of District students, not a total of the values in the table.

****Other includes students living outside of the District boundary and in localities not shown in the map on the previous page and table above**

Distribution of Students in Census County Subdivisions

Distribution of Students in Census Places

Population

According to the 2020 Census, since the 2010 Census, the total population and median age increased in the District boundary.

Based on the 2020 Census, since the 2010 Census, the number of children under the age of 5 has increased by 4 percent, the number of children ages 5 - 19 has increased by 7 percent, the number of adults ages 20 - 64 has increased by 11 percent, and the number of adults ages 65 and over has increased by 71 percent in the District boundary.

The 2000, 2010, and 2020 population counts are shown in the table below (continued on the following page).

According to the U.S. Census Bureau, “A family is a group of two people or more (one of whom is the householder) related by birth, marriage, or adoption and residing together.”

A household consists of all persons (related and unrelated) living within a housing unit.

According to the 2023 ACS Estimates, the average family size and average household size are estimated to have increased in the District boundary since the 2010 ACS Estimates.

A housing unit is a single room, house, apartment, or other group of residential rooms that have direct outside access; group quarters are excluded.

From the 2010 Census to the 2020 Census, the number of occupied and vacant housing units in the District boundary has increased in tandem with the number of total housing units.

School Enrollment

The tables below summarize the percentage of the population living within the Iowa City Community School District boundary, by age group, enrolled in school; enrolled in school and attending public school; and enrolled in school and attending private school, based on U.S. Census American Community Survey (ACS) 5-Year Estimates. Home-schooled children are counted in the private school data; the ACS does not distinguish between charter and non-charter schools. If anyone in these age groups had not attended any school in the 3 months before the survey was conducted, they were considered to not be enrolled in any school.

It should be noted that this data is not a survey of the students attending schools in the District; rather, it is based on monthly surveys sent out by the ACS to households in the District boundary. This survey data is then used to create the estimates shown in the tables below.

GENERAL DEMOGRAPHICS

The following information represents block group estimates created from market research and U.S. Census data obtained from the Environmental Systems Research Institute [ESRI]. ESRI provides a yearly update to their demographic data in increments of five years. To make updates to their demographic data set, they use American Community Survey [ACS] data that takes a series of monthly sample surveys but only from areas with populations of 65,000 or more. One year of ACS data is a period estimate as a twelve-month average, rather than a single point in time.

According to the ESRI estimates, the total population of Johnson County is estimated to increase over the next five years. As illustrated in the table below, the number of children, ages 5-18, is estimated to increase by 723 children, or approximately 3 percent.

JOHNSON COUNTY POPULATION ESTIMATES

Age Group	2024	2029	Change	% Change
Ages 0-2	5,319	5,460	141	2.7%
Ages 3-4	3,645	3,645	0	0.0%
Ages 5-10	10,727	10,684	-43	-0.4%
Ages 11-13	5,196	5,481	285	5.5%
Ages 14-18	8,574	9,055	481	5.6%
Ages 5-18	24,497	25,220	723	3.0%
Total Population	160,932	168,698	7,766	4.8%

JOHNSON COUNTY POPULATION ESTIMATES

IOWA CITY COMMUNITY SCHOOL DISTRICT BOUNDARY ESTIMATED SCHOOL-AGED POPULATION CHANGE 2024-2029

The map on the following page shows school-aged population change in the U.S. Census block groups within / around the Iowa City Community School District boundary. Population changes are based on 2024 and 2029 estimates.

A block group is defined by the U.S. Census Bureau as, “a statistical district of a census tract, generally defined to contain between 600 and 3,000 people and 240 and 1,200 housing units, and the smallest geographic unit for which the Census Bureau tabulates sample data.”

Iowa City Community School District Boundary School-Aged Population Change (2024 - 2029)

HOUSING DATA

Housing development and building permits are tracked to determine their effect on student enrollment. The table below and graphs on the following page illustrate the number of single- and multi-family building permits issued in Johnson County, Coralville, Hills, Iowa City, North Liberty, and University Heights since 2000.

RESIDENT LIVE BIRTH DATA

Utilization of resident live birth data is recommended when projecting future kindergarten enrollments. This data provides a helpful overall trend. Large bubbles in birth counts, either up or down, can also be planned for or anticipated by the District.

In addition, the live birth counts are used in determining a birth-to-kindergarten and birth-to-first grade survival ratio. This ratio identifies the percentage of children born in a representative area who attend kindergarten and first grade in the District five and six years later. The survival ratios for birth-to-kindergarten, birth-to-first grade, as well as grades 1-12 can be found on the following page of this report.

Data is arranged by the residence of the mother. For example, if a mother lives in Iowa City but delivers her baby in Cedar Rapids, the birth is counted in Iowa City. Live birth counts are different from live birth rates. The live birth count is simply the actual number of live births. A birth rate is the number of births per 1,000 women in a specified population group.

The table and graph include the resident live birth counts for Johnson County.

RESIDENT LIVE BIRTH COUNTS

Year	Johnson County
2009	1,711
2010	1,792
2011	1,733
2012	1,830
2013	1,767

JOHNSON COUNTY**

SURVIVAL RATIOS

The chart below demonstrates the ten-year changes, by grade level, in enrollment as students move through the system. Percentages greater than 100 indicate that there are more students than there were in the previous grade the previous year. In other words, there was an increase in student population where new students were added to the system. Percentages less than 100 indicate that there was decline or students left the system. If the exact number of students in 1st grade during the 2015-16 school year were present in 2nd grade for the 2016-17 school year, the survival ratio would be 100 percent.

Birth-to-Kindergarten and Birth-to-First Grade: This ratio indicates the number of children born in the area who attend kindergarten and first grade in the district five and six years later. What is important to note is the trend in survival ratios, not necessarily the actual number.

Grades 8 to 9: The higher than usual percentage may be a result of school district promotion policies. Often in school districts, students are promoted from 8th to 9th grade and after one year in 9th grade do not have sufficient credits to be classified as a 10th grader and are counted again as 9th graders the following year. There may also be students who are attending private or charter schools or are home schooled through grade 8 and then attend public schools for high school education.

The COVID-19 pandemic introduced an unforeseen level of volatility, nationwide, as seen in the survival ratios for the 2019-20 to 2020-21 and 2020-21 to 2021-22 school years. These ratios will need to be monitored closely over the next few years as new trends are established.

Survival Ratios - District-wide

IOWA CITY COMMUNITY SCHOOL DISTRICT HISTORICAL ENROLLMENT

As indicated in the table below, enrollment in the Iowa City Community School District has increased by 1,198 students from the 2015-16 to the 2024-25 school year. Since the 2019-20 school year, K-5 enrollment has decreased by 394 students.

Historical Enrollment - District-wide

PROJECTED ENROLLMENT

Woolpert developed low, moderate, high, and recommended enrollment projections for the Iowa City Community School District. The moderate enrollment projections are based on a selected average or weighted average of survival ratios (in this case, a 3-year weighted average). The low and high enrollment projections are developed using statistical distributional theory, providing the District with a more conservative (low) and more liberal (high) enrollment projection. The recommended enrollment projection is based on a detailed analysis of historical enrollment and resulting survival ratios over the past 10 years. Significant shifts in survival ratio patterns are realized and accounted for in determining projection ratios independently for each grade level. The recommended illustrates the most likely direction of the District based on more recent trends.

The range of enrollment projections from low (conservative) to high (liberal) are offered due to the limitations of the cohort survival method in factoring changes to policies, program offerings, and future changes in housing and migration patterns. For example, the low enrollment projection might be used if housing declines significantly more than anticipated; the high enrollment projection might be used if housing growth increases at a more rapid rate than seen in recent years.

It should be noted that the actual live birth counts are available through 2022 and project kindergarten enrollment through 2027-28. To project kindergarten through 2034-35, a weighted average of the last 5 years of live birth counts was used.

IOWA CITY COMMUNITY SCHOOL DISTRICT PROJECTED ENROLLMENT—RECOMMENDED

Based on the Recommended projected enrollment, student enrollment in the Iowa City Community School District is projected to decrease from 14,415 in the 2024-25 school year to 13,609 students in the 2034-35 school year.

The varying shades of color in the table represent statistically significant cohort sizes. The darker blue represents smaller cohorts, while the darker red represents larger cohorts, comparatively.

CONCLUSION

As with any projection, the District should pay close attention to live birth counts, enrollment in elementary schools, open enrollment, non-public enrollment, in / out migration patterns, and any housing growth. It is recommended that this document be reviewed on an annual basis to determine how more recent growth and enrollment trends will impact the enrollment projections.

Woolpert is pleased to have had the opportunity to provide the District with this demographic study. We hope this document will provide the necessary information to make informed decisions about the future of the Iowa City Community School District.

APPENDIX D

LIVE/ATTEND ANALYSIS

The tables on the following pages illustrate live/attend analyses for the Iowa City Community School District. These tables cross-references student enrollment and the attendance zone in which students reside, for each respective school year. The numbers in bold denote students who live in the boundary of and attend their zoned school. Transfer-in denotes the number of students who transfer into a school from outside of the attendance zone. Transfer-out denotes the number of students that leave their zoned school to attend another school. Out of District indicates students who reside outside of the District and Unmatched indicates students who were unable to be geocoded (matched to a point on a map).
